Basic Information Of The Course

Academic Year : 115 Academic Year

Term : Semester 1

Department : Computer Science and Information Engineering Year Three Class B

Educational system : Day Division

Class Time/Place : Tuesday 星期二/ D5,D6,D7/MD204

Subject name : Introdution to Database Systems

Course type : Required

Credit : 3

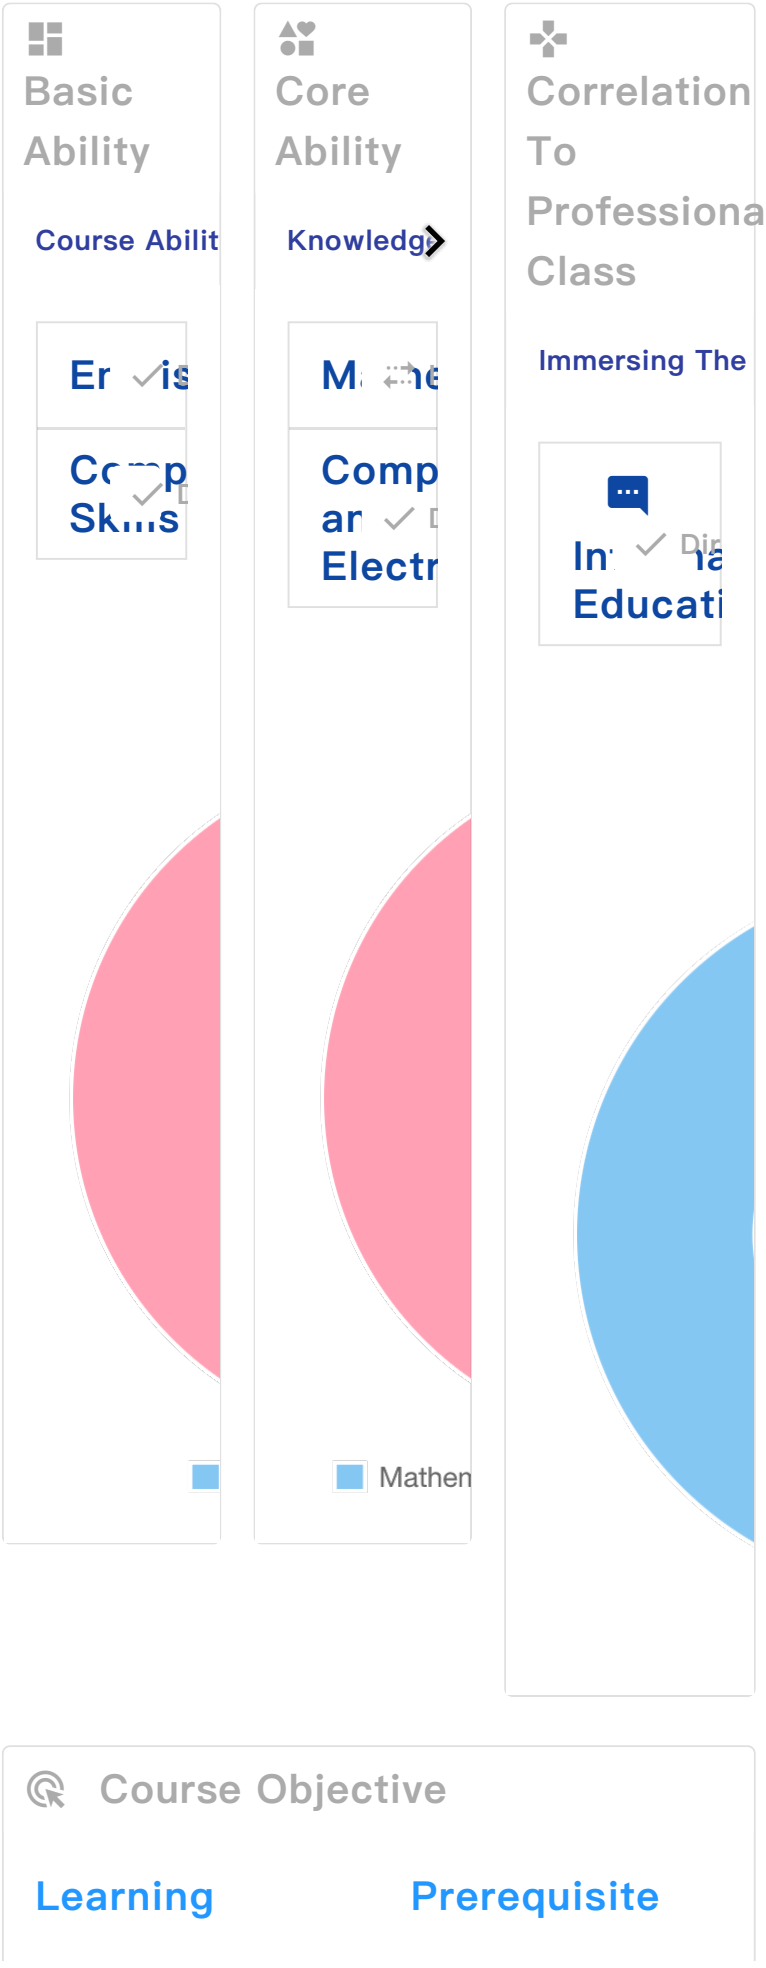

Course/material language : Chinese / Chinese & English

Instructor : CHANG, SHIN-HUNG

Teacher's background : Full-time

Expertise : Qualified

Prerequisite course : None

Databases today are essential to every business. They are used to maintain internal records, to present data to customers and clients on the World Wide Web (WWW), and support many commercial processes. The power of databases comes from a body of knowledge and technology that has developed over decades and embodied in specialized software, called database management system (DBMS). This course is designed to introduce concepts, methods, and skills essential in managing an efficient database system. "Relational Database" will be the main focus with related

In this couse, you will be required to write a JAVA program on Android platform. You will better be capable of writing JAVA program.

topics such as relational model, design concepts, and structured query language. In this course, students will be divided into several groups for handling and completing a final project, called “micro collaboration between industry and school”. Through finishing final project, students can integrate and apply any knowledge learned from this course and learn the spirit of team work.

Course Syllabus

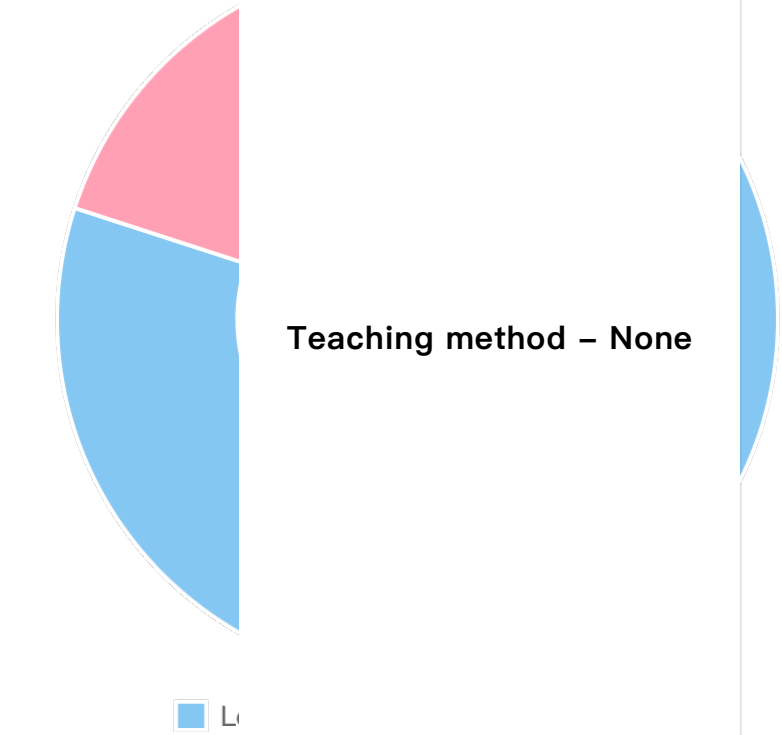

Number of classes	Course topics	Co
1	Introduction to Database System	
2	Term Project Proposal SQL(1)	
3	SQL(2)	

4	SQL(3)	
5	Relational Algebra(1)	
6	Relational Algebra(2)	
7	E-R Model(1)	
8	E-R Model(2)	
9	Midterm Exam	
10	Term Project Midterm Check Relational Database	
11	Functional Dependency(1)	
12	Functional Dependency(2)	
13	Normalization	
14	1NF 2NF Relation Decomposition	
15	BCNF 3NF	
16	Multi-value Dependency 4NF Transaction	
17	Term Project Special Exhibition	
18	Final Exam

Code Of Conduct For The Class

All of the projects you implemented for this course must be entirely your own. It is permissible to discuss programs and course issues with department faculty and teaching assistants,and you may discuss general concepts and issues relating to class work with fellow students in the class, but you should take care not to discuss or share design or implementation of your individual assignments with fellow students. Violations of this policy will be regarded very seriously, and may result in failure for the assignment or the entire course.
